

Welding Services

Implementation of wear resistant welding services on parts and equipment

Carrying out hard facing welding on parts and equipment surfaces with automatic machines using alloy flux cored welding wires of our own production to enhance wear resistance against mineral abrasion is a part of Kavosh Joosh company activities. This service is applied on the equipment made by the customer and it is necessary to have semi-finished parts and equipment in order to apply the anti-wear welding service, any additional operations of cutting and sizing, drilling and installation of accessories are performed. These services can be made on the equipment of the direct reduction and pelletizing unit of the steel industry and the equipment of the cement and mining industries, etc. All kinds of equipment, including shells, cones, pipes, crusher plates, etc., have been manufactured and welded by this company.
